

Customer No. 24498  
Attorney Docket No. PF020081  
Office Action Date: January 31, 2008

RECEIVED  
CENTRAL FAX CENTER

JUL 21 2008

**IN THE CLAIMS:**

Please consider the following:

1. (Previously Amended) Method of creation of a new communication network by a wireless terminal, wherein the wireless terminal initially being part of an existing centralized network that includes an access point able to control the association of wireless terminals to its network, it includes, for the associated terminal, the steps of:

- disassociation of the terminal from the existing centralized network; and
- initiation of a procedure for creating a new network including a declaration of the terminal as access point of the new network, where the operating parameters of the new network are such that communications on the new network do not interfere with the existing network.

2. (Currently Amended) Method according to Claim 1, wherein the terminal initiates disassociation in at least one of the following cases:

- frequency change rejection by the access point of the existing network following a request for frequency change from the terminal ~~in this sense~~; or
- connection establishment rejection by the access point of the existing network following a request for connection establishment from the terminal ~~in this sense~~.

3. (Previously Presented) Method according to Claim 1, wherein the access point of the existing network initiates the disassociation.

4. (Currently Amended) Wireless terminal including an interface with a communication medium, a microprocessor and a memory, which terminal additionally includes in its memory a program ~~comprising program means~~ adapted to perform a disassociation of the terminal from a network and program means to perform an initiation of a procedure for creating a new network including a declaration of the terminal as access point of the new network, where the operating parameters of the new network are such that communications on the new network

do not interfere with the existing network.

5. (Currently Amended) Wireless terminal according to Claim 4, wherein the said program means are adapted to initiate the disassociation from the existing network in one of the following cases:

- frequency change rejection by the access point of the existing network following a request for frequency change from the terminal ~~in this sense~~; or

- connection establishment rejection by the access point of the existing network following a request for connection establishment from the terminal ~~in this sense~~.
